RESEARCH HIGHLIGHTS

First-Ever Physical Review Letters (PRL) Publication from CHRIST University

Publication from Complex system Lab :
Dr. Mithun Thudiyangal together with a group of researchers from University of Luxembourg, Luxembourg has Published in the prestigious American Physical Society Journal Physical Review Letters, bringing Accolades to Christ University.

The group propose and establishes the generation of spontaneous quantum turbulence (SQT) via the KZM during Bose-Einstein condensation induced by a thermal quench for the first time.

Publication from Cybersecurity Lab : What drives us to click? Uncovering the behavioral determinants behind phishing susceptibility

Dr. Sreeja C. S. and **Dr.Santhosh K. R.** published their research in the Information and Computer Security journal through a collaborative effort between the Centre for Quantum Technologies and Complex Systems (CQTCS) and the Behaviour Decision Lab, CHRIST (Deemed to be University).

What We Uncovered
Thematic analysis revealed a complex interplay between internal and external factors influencing phishing susceptibility. Internal factors-cognitive processes, emotional responses, and knowledge-shape individual decision-making. Phishing process-driven behavioral responses, influenced by contextual factors and interaction with the phishing attempt, contribute to vulnerability.

Why this research Matters ?
This comprehensive understanding can inform the development of multifaceted interventions that address both individual and situational factors to enhance cybersecurity awareness and resilience.

CQTCS Launches Certificate Course on Emerging Quantum Technologies

The Centre for Quantum Technologies and Complex Systems (CQTCS), CHRIST (Deemed to be University) inaugurated the Certificate Course on Emerging Quantum Technologies on 6 June 2026. The three-month programme was launched to equip students with foundational knowledge and practical exposure to modern quantum technologies. Conducted in collaboration with CADFEM India Pvt. Ltd., the course combines expert-led theoretical sessions with industry demonstrations. Covering topics such as Quantum Technologies, Nanophotonics, and Quantum Photonics, the initiative strengthens academia–industry collaboration.

QUANTUM NEWS ROUNDUP

Quantum-Inspired Laser Technique Could Speed Up Drug Discovery

Researchers at Texas A&M University have developed TRIP (Thermostable Raman Interaction Profiling), a laser-based technique that measures quantum forces in protein interactions and drug binding. Tested on the SARS-CoV-2 main protease, TRIP analyzes molecular vibrations to predict antiviral drug effectiveness, potentially accelerating drug discovery for diseases such as cancer and Alzheimer's.

IISc Develops Smart Materials for Quantum Devices

IISc researchers have created smart magnetic materials whose magnetic properties can be reversibly controlled using pressure, heat, or light. These materials enable precise manipulation of electron spin, advancing quantum sensors, quantum memory, spintronic devices, and energy-efficient data storage-supporting India's goals under the National Quantum Mission.

IBM to Install One of India's First Quantum Computers in Amaravati

IBM will install one of India's first quantum computers in Amaravati, Andhra Pradesh, by September 2026 as part of the Quantum Valley Tech Park. The initiative will provide access to advanced quantum computing for sectors like AI, drug discovery, and climate modeling, and strengthens India's position in the global quantum landscape.
